**Subject:** Docket Number 04-IEP-1G

I have recently been made aware of an effort to prohibit the publishing of the report: "Assessment of Avian Mortality from Collisions and Electrocutations", CEC-700-2005-015, by Melinda Dorn. The purpose of this email is to oppose such efforts to discredit or to suppress this report and any such findings within it.

I believe it is important that this information, regardless of who it is written by, be reported and its conclusions and results fully and carefully considered.

Renewable sources of energy are incredibly important, especially in the near future. And an important source of renewable energy is wind power via the large wind turbines in places such as the Altamont pass. But steps should be taken to make it a safe source of energy for the environment, which includes the bats and birds that have been found to have significant mortality issues with these turbines. The first step in solving any problem is in acknowledging its existence, which publishing this report by the CEC will accomplish.

Thank you for taking your time to read this,  
Alexander Yuh
